

Object: Important Update on Our Flame Retardant Products

Dear Customers,
We hope this message finds you well.

We would like to inform you about an important change we are implementing in our production processes, in line with our commitment to sustainability and safety.

1. Replacement of Conventional Flame Retardant Products

We are pleased to announce the initiation of a process to replace all conventional antimony-based flame retardant chemicals with more sustainable alternatives. This decision aligns with our sustainability and chemical risk management policies.

2. Compliance with BAT and International Standards

Our approach adheres to the Best Available Techniques (BAT) for the textile industry, particularly BAT 14, which recommends the use of alternative and safer flame retardant substances. This choice allows us to comply with European and international requirements for protecting health and the environment.

Benefits for Our Customers

- Sustainability:** The new flame retardant products are more environmentally friendly and safer for human health.
 - Regulatory Compliance:** We will help you meet the increasing sustainability requirements demanded by the market.
- Price Stability:** Replacing antimony-based products, whose costs are continually rising, will enable us to offer more stable and predictable pricing.

3. Timeline and Implementation

- Starting in the coming months, some articles will be treated with the new flame-retardant products.
- By 2025, we will complete the replacement across our entire product range.

We assure you that the new flame-retardant treatments will guarantee the same high performance and technical standards you are accustomed to.

To help you evaluate this innovation, we are pleased to offer you the opportunity to request samples with the new flame-retardant treatments. This will allow you to directly test the characteristics and performance of the new products, verifying their effectiveness and quality.

Our technical department is at your disposal to arrange testing and provide all the necessary support in evaluating the samples.

We are excited about this step forward toward a more sustainable future and sincerely thank you for the trust you continue to place in our company.

For any questions or clarifications, please do not hesitate to contact your usual company representatives.
